

School District Partner Feedback November 2013

"This year is a turning point for the Centrailia School District as we have more online testing for students than ever before, making high speed internet connectivity a crucial component in our success with the program. The broadband infrastructure that Fatbeam built has allowed for advanced speeds between buildings and a more seamless online experience for our students and faculty that was otherwise unavailable."

-- Mitch Thompson, Director of Fiscal Services
Centrailia School District, Centrailia, Washington

"Our main goal for building out a fiber network in the Butte School District is to create a reality where we have one-to-one computing for our students. In today's day and age, it is not acceptable for students to have to sign up and wait for lab time. Access should be real time and now, it will be."

"We knew before anything we needed the network infrastructure that would be flexible enough to meet our demands in our diverse educational environment. Through the RFP process we outlined the type of network infrastructure that would meet our present needs as well as offer a more scalable solution that would provide for future expandability at an affordable price. FatBeam, submitted an RFP that was not only cost effective but, exceeded the complex infrastructure requirements outlined in our RFP. This project has been a true collaboration and should stand as an example of how business can work with educational systems to successfully deliver the most comprehensive and innovative educational programming to all students."

-- Judy Jonart, Superintendent, Butte School District
Butte School District, Butte, Montana

"As staff and students become more and more dependent on technology in teaching and learning it becomes increasingly important that we provide a robust and reliable infrastructure."

-- Jean Bengfort, Director of Technology
Coeur d'Alene School District, Coeur d'Alene, Idaho
